## Dampener Roller Covers

Superior proudly supplies dampening cover products from most major manufacturers. Pre-cut size covers for your offset press rollers, for all presses large or small, are readily available.

In order to deliver the highest level of durability and performance on your press, we offer these options:

- Hyton
- Red 1
- Atex
- Blue-Boi/Blue Lightning
- Red Runner
- Velour

Our broad selection of covers allow you to select the balance of performance and durability required to deliver the highest levels of print quality to your customer.

## Rogers Dampening Sleeves

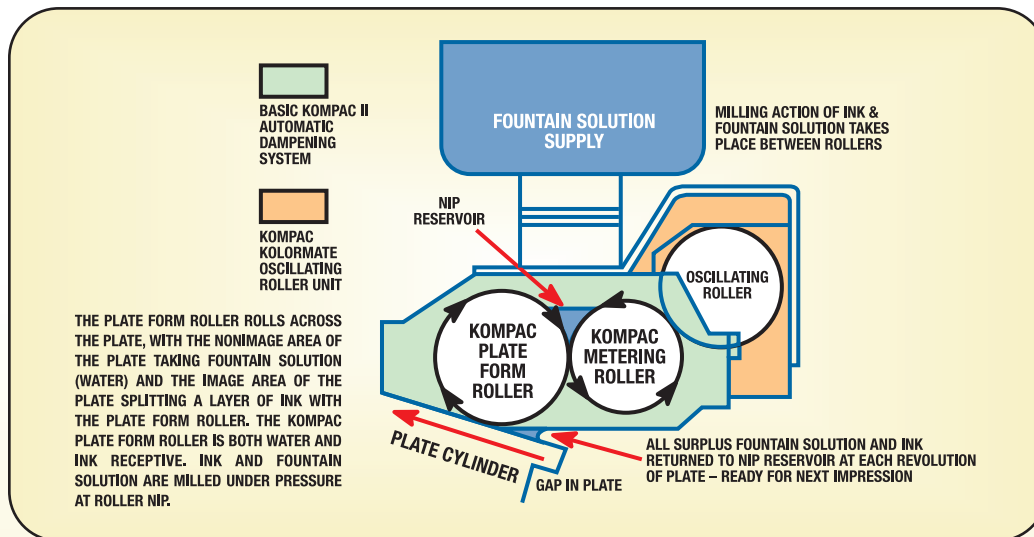

When you must insure consistent, high quality printing results without sacrificing the ease of fast installation; no linting and precision control for your dampening system, you need Rogers Sleeves. Call with the five digit product number for the sleeve specifically sized for your press!

**Choose from our selection of synthetic or pure cotton covers!**

## Varn Kompac II® Automatic Dampener System

Let the Unique Technology of the Kompac System help you dramatically improve Productivity in your plant.

### THE THEORY AND EXPLANATION OF KOMPAC

When you make the decision to use the Kompac II System, you can count on the advantages and cost reduction benefits of:

- **Automatic Ink / Water Control:** no matter how heavy the color coverage or what type ink on any plate
- **Reduced Paper Stock Waste:** Poor ink / water control is the major cause of waste in offset printing. Some customers have saved up to 5% of annual stock purchases thanks to the consistency of the Kompac System.
- **Improved Print Quality:** Jobs requiring bright/sharp colors and dense solids can now be run on smaller presses using the Kompac System. Fine screens, tiny reverses and crisp halftones will radically improve your print quality.
- **Faster Print Speeds:** The superior Print Quality of the Kompac System is great, but when you get it at normal press speeds vs. slowing down and losing productivity, you win both ways. If you are not running technically challenging jobs, you may be able to run them at higher press speeds with no sacrifice in print quality!

Please call for pricing of the Kompac System for your press and also for the full range of replacement parts! (Model and serial number required, please.)

**Print speed, quality and productivity improvements all in one!**

Quality • Service • Value

## Rubber Rollers

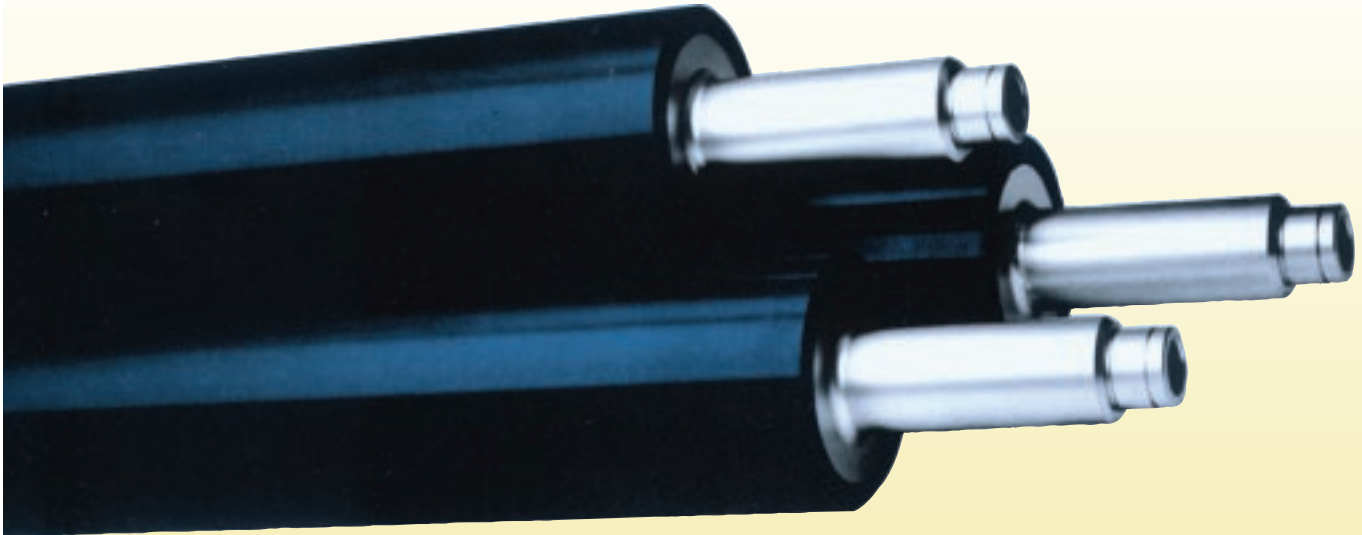

*New Press Ready Rollers with Bearings ready to use!*

*We can provide rollers for most popular offset press models with many available for shipment to you within 24 hours! Prompt shipments of complete roller sets or individual rollers are a telephone call away. Call us today to experience the world class quality of our OEM replacement rollers, made under ISO 9001 production processes and available to you at competitive pricing.*

## Rilsan® Polymer Roller Resurfacing

*A New Technology Alternative to Copper or Ebonite Roller Surfaces*

*A proprietary polymer roller surface that delivers improved print quality, higher efficiency and less downtime. Specific benefits include: improved ink distribution and transfer, superior resistance to the corrosive effects of ink/solvents and no need to “reactivate” roller surfaces with chemicals or special solutions. Normal leadtime of 2-4 weeks for resurfacing; please call for price quote. Limited availability of finished rollers – please call our Order Service Desk with your part number.*

**Call us for more information about all our roller solutions!**

## Water Containers – “S” Line Presses

Made to original specifications, our containers fit your press just like the OEM version. Please call for other press-mounted water containers, we may be able to help!

## Water Fountain Bottles (1 AND 2 QT.)

Bottles to replace standard Equipment on AB Dick, Multi, Hamada and Ryobi.

## Roller Treatments, Cleaners and Washes

\* Available from many leading Manufacturers \*

If you require a special brand name product . . . just call!

### Some of the Products Available

### Description

Wet Roll	Improves ability of rubber rollers to hold and transfer water
Cleaner/De-Sensitizer	Improves dampening water transfer by your chrome rollers
Meter-Rol-Clean (MRC)	Environmentally friendly roller cleaner in 5 or 55 gallon containers Also available in NC (mild) and ALT (strong) type
Dri-Rol Lube	Multi-purpose roller lubricant
Deglaz-it	Unsurpassed scrubbing agent removes glaze from rollers and blankets
Lub-a-rol 7074	Anti-friction grease; eliminates oxidation of stored ink rollers
Putz Pomade	Liquid or paste that cuts color change time, sharpens reproduction and can be used while the press is still inked up

Try our cost effective preventative maintenance products!
